Official Municipal Parking Lots 77

INTRODUCTION

The annual inventory of carpool parking activity was conducted in November 1990. The inventory surveyed parking areas for the following: signs, facilities, and vehicle counts.

RESULTS

• Total Number of Official Ministry Parking Lots:	52
• Total Number of Parking Spaces:	3438
• Total Number of Vehicles Parked:	2168
• Average Overall Occupancy:	64%

Since the introduction of the first six carpool lots in 1979, the number and usage has been growing steadily during the past decade.

In the year since the 1989 inventory, the ministry has opened two new carpool parking lots and expanded two others, which altogether increased the number of spaces by 3.9%. Improvements were also made to several other lots. The number of vehicles using the lots increased by 22%, and overall lot occupancy was at an all-time high of 64%. This rise in usage is due in part to the sharp increase in the price of fuel during the past several months. Ten lots were at or near full capacity at the time of the survey.

The survey also showed that some lots are used for purposes for which they are not intended – storing trucks and trailers, parking school buses, abandoning unwanted cars, etc.

As part of the inventory, many other sites were checked for carpool parking activity. Nineteen sites with carpool activity are identified in the inventory; a total of 188 vehicles were parked at these sites.

One carpool lot established by the municipality of Sutton was surveyed.

Improvements to these lots are being made on a continuing basis and have resulted in the installation of telephones at 31 locations. The survey indicates that 39 of the 52 lots, 88% of the parking spaces, are now paved.

BENEFITS

The 2168 vehicles parked in official ministry parking lots:

- SAVE ENERGY – 6 291 000 L of gasoline annually.

- REDUCE CONGESTION – reduced annual vehicle kilometres travelled by 51 164 000 (during the peak hours).

- IMPROVE SAFETY – around intersections; vehicles are no longer parked along interchange ramps.

These benefits are calculated based on the following assumptions:

- Average distance from lot to work: 47.2 km. Taken from TEMP report SAR-81-02, "Carpool Parking in the Toronto Commutershed" (based on a 1979 survey).

- Fuel efficiency of vehicles: 12.3 L/100 km based on Statistics Canada 1986 Fuel Economy Survey.

- Two hundred and fifty working days per year.

These figures represent only the savings generated by daytime users of the parking lots during a normal work week. Further savings are generated by the many weekend and evening users of lots, who carpool perhaps for shopping or recreational purposes.

The 3438 parking spaces provide a safe, convenient, and highly visible service to the public.
